[PDF] Chord A Scalable Peer To Peer Lookup Service For Internet

To efficiently locate the node that stores a particular data item. this paper presents chord, a distributed lookup protocol that addresses this problem. chord provides support for just one operation: given a key, it maps the key onto a node. data location can be easily implemented on top of chord by associating a key with each data item, and storing the key/data item pair at the node to which ...

[PDF] Faster A Concurrent Key Value Store With In Place Updates

This paper presents faster, a new key-value store for point read, blind update, and read-modify-write operations. faster combines a highly cache-optimized concurrent hash index with a hybrid log: a concurrent log-structured record store that spans main memory and storage, while supporting fast in-place updates of the hot set in memory. experiments show that faster achieves orders-of-magnitude ...
